

Critical Thinking

Critical thinking is purposeful. It involves maintaining an open minded attitude & being able to think about different ways of understanding the information before you.

Critical thinking also includes a process of evaluating claims & arguments in order to come to logical & consistent conclusions, assessing these conclusions against clear & relevant criteria or standards, & being able to spell out the reasons for the judgements you have made.' (Turney 2014)

What is it?

Core skills such as professional curiosity, professional judgement, the ability to conduct rigorous assessments and draw conclusions are vital to safe planning.

Practitioners must have an understanding of the blocks & challenges in safeguarding work and apply strategies to manage these, including situations of hostility & disguised compliance & to challenge their own and others' practice both at individual and agency level

Critical thinkers are:

- open to new information and will seek and consider alternative hypothesis
- aware that stress and the opinions of others can distort thinking
- able to consider information from multiple sources, even those that have opposing views
- self-aware, self-reflective, active listeners, and empathetic

Recognition: It is important that practitioners are willing and able to recognize that a previous decision may have been wrong – though reasonable at the time when the decision was made. These mistakes are an inevitable part of practice and recognising them is an essential element of good practice (Munro, 1996).

Key Issues: Consensus isn't always safe. The fact that everyone agrees does not mean that they are right - and certainly does not keep a child safe. There is no safety in numbers - risk does not decrease because more people agree.

Minority views are important and must be considered and noted within multi-agency work. Consider what it is about that worker's experience that differs from others.

How to respond:

- What is the assessment for?
- What is the story?
- What does the story mean?
- What needs to happen?
- How do we know we are making progress?

Action:

Developing the habits required to support critical thinking takes conscious effort. Treat your first reaction to a situation, issue, or person as temporary. Resist the urge to pass judgement based only upon initial reactions.

Have you observed carefully?

Examine your reaction(s). Try to understand why you reacted the way you did. What assumptions were you making? What previous experiences may have contributed to your reaction?
